

Population Payment Management

Accelerate and sustain value-based program success

Overview

Many healthcare payers are in a value-based quagmire. Market forces and government agencies are mandating Alternative Payment Model (APM) implementation regardless of payer capabilities, including necessary information and tools. Payers need reliable historical data to model cost and quality targets, operational flows to manage the process from opportunity assessment to formalizing program levers, and tools to automate transparency and settlements. While there is abundant industry analysis and advice, it is up to the payers to adopt, institutionalize, and ultimately manage their programs end-to-end. Most of these efforts are confounded by the many different internal and external stakeholders, in-house technology solutions, desktop tools, and provider portals that have been cobbled together to accomplish critical day-to-day tasks.

Edifecs Population Payment Management solution solves these problems as a single, centralized platform to modernize, standardize, and scale APMs across all networks and lines of business – no matter the payment model or complexity of contract arrangements. It allows business users to rapidly experiment and model in ways previously only possible with teams of actuaries and technical resources.

Population Payment Management is purpose-built to exceed the demands of value-based programs at scale – no matter the size or volume of your contracts.

End-to-end support for:

Primary Goals

Program Models

Payment Models

Performance and Contract Levers

Payment Mechanisms

Provider and Member Attribution
